TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, PHP, Java

Frameworks & Libraries: FastAPI, Flask, Django, Node.js, Express.js, Next.js, React.js, Pandas, NumPy, Scikit-Learn, TensorFlow, PyTorch, OpenCV

Databases: PostgreSQL, MySQL, MS SQL, MongoDB

Cloud & DevOps: AWS, Microsoft Azure, Docker, Git, CI/CD

Data & Analytics Tools: Power BI, Tableau, SQL Server Reporting Services, Power Automate

EXPERIENCE

Software Engineer

Apr 2025 - Mar 2026

Silver29 Corp.

Mississauga, ON

- Developed and deployed a full-stack e-commerce operations platform serving 3,000+ daily transactions with JWT-based auth, role-based access control and optimistic concurrency to prevent double-sells during flash inventory drops
- Identified and resolved a recurring overselling bug affecting 5% of peak-hour orders by implementing event-driven inventory sync with RabbitMQ message queues
- Built a self-service internal tool for non-engineering teams to manage the full order lifecycle significantly reducing ad-hoc escalations to the engineering team
- Engineered a sales-demand forecasting pipeline by performing EDA on 100K+ multi-source customer records and training time-series models to predict purchasing patterns enabling targeted campaign planning

Full Stack Software Developer Co-op

Sep 2023 - Aug 2024

Ground Effects Ltd.

Windsor, ON

- Modernized legacy PHP systems into scalable full-stack applications using Next.js, TypeScript and Python, Node.js services improving cross-team reliability and reducing support tickets by 30%
- Designed and optimized MS SQL stored procedures and ETL pipelines that created a shared data layer across manufacturing, logistics and finance departments cutting data retrieval time by 50%
- Built and maintained high-performance REST APIs connecting 5 internal systems used by 300+ employees with 98.5% measured uptime over 6 months use
- Automated backend and deployment workflows through CI/CD pipelines and Power Automate scripts saving 5+ hours of manual effort per week
- Consolidated fragmented operational data into Power BI and Tableau dashboards with real-time refresh, improving visibility into resource utilization and delivery performance

EDUCATION

University of Windsor

Sep 2021 – Apr 2025

Bachelor of Computer Science Honours (Co-op) | Minor in Mathematics

Windsor, ON

- Cumulative Average: 89.3% | President's Honour Roll | Dean's List

PROJECTS

Spottigo

- Developed a location-aware event aggregation system that ingests 10,000+ events from Ticketmaster, Eventbrite and Meetup APIs with content-based filtering for personalized recommendations
- Created a low-latency geospatial search pipeline using PostgreSQL + PostGIS, Mapbox GL JS and WebSocket messaging reducing event query latency from 5s to 100ms through spatial indexing and table partitioning

TextBuddy

- Fine-tuned T5-base on 150K ChatGPT paraphrase pairs (12+ hour training cycle) implemented diversity-penalized beam search generating multiple candidate outputs and integrated RoBERTa emotion classification across 7 categories
- Engineered a full-stack NLP platform (Next.js + Flask) supporting summarization, paraphrasing, sentiment analysis and multilingual translation across 15 languages achieving 95% accuracy with sub-second inference latency

Expense Tracker App

- Led a 4-person team building an Android expense management app with user-isolated financial tracking and real-time cross-device sync
- Designed an interactive analytics module with aggregated category views and progressive loading for fast on-device visualizations
